

«ANTI-DOPING AGENCY» SNCO, ARMENIA

**Medical substances and their trademarks
permitted for use in professional and
amateur sports**

Introduction

Athletes and coaches are aware of the “List of Prohibited Substances and Methods” in sports. The “List of Prohibited Substances and Methods” is reviewed annually by the World Anti-Doping Agency and published in September-October of the current year for the following year. The total number of prohibited substances is not very large, moreover, a significant part of them will never enter the pharmacy chain and medical practice - especially anabolic steroids. However, understanding and finding out whether a specific drug is prohibited or not is quite difficult.

The NADO of Armenia begin regular publication of the List of Permanently Allowed Drugs in Professional and Amateur Sports, which includes a list of drugs (their trade names) registered in the Armenia and being sold in the pharmacies and permanently allowed in professional and amateur sports and their trade names, which, if necessary, can be used for the treatment of various diseases.

The information on the allowed list is for reference only. It does not contain any medical recommendations, for which you should obtain qualified information from a doctor.
